Environment Policy

GENERAL REMARKS

This policy defines the principles, objectives, and directives that orient environment issues of Jusoor Foundation. The Foundation is committed to creating and sustaining a culture of environment awareness and practices within the Foundation.

1. Objectives

To foster environment friendly practices within the facilities of Jusoor Foundation.
To raise environmental awareness among employees and concerning stakeholders;

2. Foundation Identity and Core Statements

The Foundation aims mainly at contributing to a sustainable development of the community, acknowledging and respecting its potentials, values and needs.

The approach is based on a strategy of broadly structured social investment, designed for short-, medium- and long-term horizons, and professionally managed. This strategy is constructed jointly with government and civil society organizations, based on a shared vision. This distinctive approach taken by the Foundation makes it a model in terms of developing links and partnerships between the public and private sectors, leveraging local resources.

The strategies for the development of policies are based on the following premises:

- Mission, Vision and Values of the Foundation;
- Strategic Planning;
- Focus Areas: Entrepreneurship, Education for Work, Health and Environment, Culture and Sports.

3. Directives

- To achieve environmental outstanding performance;
- To comply with environmental requirements, laws and norms;
- To take appropriate measures in order to prevent and control environmental risks, and negative impacts that could occur within its activities;
- To do its best to encourage its stakeholders to comply with this policy;
- In case of negative environmental impacts, The Foundation is committed to mitigate it and treat the causes of inherent liabilities.

4. Processes

To meet this commitment, the Foundation established the following considerations that are applicable throughout its overall operation.

- To preserve the natural environment through the prevention of pollution and meeting the concerning legal requirements;
- To be aware of energy and water consumption, doing its best to reduce it.
- To take actions to reduce all kind of waste, and to foster reusing and recycling practices;
- To reduce the consumption of non-renewable products in its supply chain, giving preference to contract vendors, partners and suppliers that adopt environmental friendly practices.
